

J. Doe

physicist · builds odd instruments

I study emergent structure in complex systems — how simple rules make complicated things. By night I build small interactive experiments like this desk. Currently a postdoc at the Institute for Placeholder Studies.

Publications

- J. Doe, A. N. Other (2024). **Emergent Structure in Deep Latent Spaces**. *NeurIPS*.
- J. Doe, B. Colleague, C. Third (2023). **On the Thermodynamics of Small Systems**. *Physical Review E*.
- J. Doe, C. Collaborator (2022). **A Bayesian Treatment of Observer Bias in Citizen Science**. *Methods in Ecology and Evolution*.
- J. Doe (2021). **Scaling Laws for Coupled Oscillator Networks**. *Chaos*.

Projects

- **VECTRIS** — 3D neon Tetris with a global leaderboard — three.js, WebGL, way too much bloom.
- **Desktopper** — This desk. A customisable 3D portfolio scene — fork it, swap portfolio.json, done.

Placeholder CV — swap in the real one at [public/cv.pdf](#).
